

About Dhruvil Shah

Overview

Hi, I'm Dhruvil Shah, an IT graduate, Full Stack Developer, and someone currently learning Machine Learning & AI. I am based in Anand, Gujarat, India, and I am open to new opportunities. I hold a Bachelor of Engineering (B.E.) in Information Technology from Madhuben And Bhanu Bhai Patel Institute of Technology (MBIT-CVM University), Vidhya Nagar, with a CGPA of 7.83 (June 2021 - May 2025). I completed my schooling at S.B Vakil English Medium School, Khambhat (October 2008 - June 2021). My contact email is dhruvilshah3383@gmail.com and my phone number is +91-7984480038. You can find me on LinkedIn at <https://www.linkedin.com/in/dhruvil-shah-988a94204>, on GitHub at <https://github.com/DhruvilShah1>, and through my portfolio website at dhruvilshah1.github.io.

I am passionate about full stack development and enjoy building web applications that are both user-friendly and technically strong. Apart from coding, I have represented my state in cricket, playing for ADCA (Anand District Cricket Association) and GCA (Gujarat Cricket Association) as part of a Jio-sponsored team. Cricket has taught me teamwork, discipline, and resilience - values I bring into my professional journey as well.

Technical Skills

Languages: JavaScript, Python, PHP, HTML5, CSS

Full-Stack Development: React.js, jQuery, Node.js, Express.js, Laravel, MongoDB, MySQL, Firestore

Libraries & Tools: Socket.IO, WebRTC, JWT, Pandas, NumPy, Scikit-learn

Top Skills (LinkedIn): jQuery, Firestore, Core PHP

Work Experience

Full Stack Developer Intern - Axe Force Technologies LLP, Ahmedabad (Jan 2025 - May 2025)

During this internship, I designed a WebRTC-based video conferencing solution that works on shared hosting environments, removing the need for a VPS or root server access. I built core real-time communication features using Laravel, PHP, JavaScript, Firestore, and WebRTC, including camera/microphone control, screen sharing, live chat, polls, Q&A, and an AI chatbot. I also created an admin tracking dashboard for monitoring in-meeting actions and host controls for muting or disabling participants, while following clean code practices for maintainable codebases.

Web Development Intern - Jinarth Infotech, Anand (May 2024 - June 2024)

I built a fully functional e-commerce website with product listings, shopping cart, checkout, and order tracking using HTML, CSS, JavaScript, and PHP. I also developed an admin panel for managing products, orders, and user accounts. I contributed to building responsive and accessible websites, gaining practical experience delivering client-ready features in a professional team environment.

Projects

Video Conferencing Solution

I engineered a browser-based video conferencing app supporting camera/microphone toggle, screen sharing, polls, Q&A, live chat, and an integrated AI chatbot during calls. I used WebRTC for peer-to-peer audio/video streaming to ensure low-latency, secure communication without relying on third-party conferencing services, and added role-based host controls with a real-time admin activity log for full meeting oversight.

Doctor Appointment & Queue Management System

I built a full-stack MERN healthcare platform featuring appointment booking, doctor schedule management, and patient tracking through role-based dashboards for Patients, Doctors, and Admins. I implemented real-time patient queue management using Socket.IO with live updates, patient skipping, status tracking, and instant synchronization across clients. I designed RESTful APIs for authentication, appointments, doctor profiles, and queue handling using Node.js, Express.js, and MongoDB, and integrated QR-based prescription scanning in the React.js + Tailwind CSS frontend to streamline pharmacy workflows. The live demo is available at <https://doctor-appointment-kohl-phi.vercel.app/>.

Loan Approval Prediction using Machine Learning

I developed a loan approval classification model using Python and Scikit-learn, performing data preprocessing, feature engineering, and exploratory data analysis. I evaluated six ML algorithms (Logistic Regression, Decision Tree, Random Forest, SVM, KNN, and XGBoost) and selected XGBoost as the optimal model, achieving 98% accuracy.

Organ Donation System & E-commerce Platform

I have also built an Organ Donation System and an E-commerce platform, where I used MySQL and Firestore for database management and backend operations. These projects strengthened my skills in frontend design, backend development, and database handling, while applying technology to solve real-world problems.

Certifications

I am currently pursuing Data Science & AI Masters 2026 - From Python to Generative AI on Udemy. I have completed: Introduction to Structured Query Language (SQL) from the University of Michigan, Mastering Laravel Framework and PHP from Board Infinity, Crash Course on Python from Google, Developing Responsive Web Pages Using HTML5 and CSS3, and Python for Data Science, AI & Development.

Achievements & Activities

Beyond technology, I represented a Jio-sponsored team in state-level cricket tournaments organized by the Gujarat Cricket Association (GCA) and participated in district-level matches under the Anand District Cricket Association (ADCA).

Goals

I am eager to contribute as a Full Stack Developer, collaborate on impactful projects, and continue growing in the world of software development, while expanding my skills in Machine Learning and Artificial Intelligence.
